DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it has grammatical problems. Correction is required. See MPEP § 608.01(b).

Drawings

The drawings are objected to because the figures and especially the 2. numbering are too difficult to make out. The shaded drawings are a nice touch but the details are too difficult to discern. Also, the numbering is faded and sloppily drawn. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing

Application/Control Number: 10/710,850

Art Unit: 2839

sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the pivotal motion causing the actuation arms to slide along a shaft must be shown or the feature(s) canceled from claim 8. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing

sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1, 4-5, 7, 10 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Fukunaga et al.

Fukunaga discloses a socket apparatus (title), comprising: a socket 11 having contacts fig. 5 disposed therein fig. 6; and a lid (fig. 2 topside) pivotally 23 coupled to the socket, wherein pivotal motion of the lid opens and closes the contacts (abstract 1st and 2nd sentences).

Claim 4 Fukunaga discloses a board (figures 2 & 6 at 26).

Claim 5 Fukunaga discloses that the lid is coupled to the socket via a hinge block 23.

Claim 7 Fukunaga discloses that s spring 22 is coupled to the hinge block fig. 3 to bias the lid to an open position fig. 31A.

Claim 10 Fukunaga discloses a method comprising loading an IC into the socket closing the apparatus and testing (abstract 1st sentence).

Claim Rejections - 35 USC § 103

- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary.

 Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/710,850

Art Unit: 2839

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

8. Claims 2-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Fukunaga et al as applied to claim 1 above, and further in view of Hachuda. Fukunaga does not disclose a heat sink.

Hachuda discloses a heat sink 23 and a spring 30 between the heat sink and lid fig.

- 7. At the time the invention was made it would have been obvious to one of ordinary skill in the art to modify the apparatus of Fukunaga with the heat sink setup of Hachuda. The motivation for this is ubiquitous in this art and would be to allow for heat dissipation, which is almost a necessity in this art. Springs provide the cheapest way to help mount the heat sink.
- 9. Claim 6 rejected under 35 U.S.C. 103(a) as being unpatentable over Fukunaga et al.

Fukunaga does not disclose that the hinge and latch are opposite each.

At the time the invention was made it would have been obvious to one of ordinary skill in the art to modify Fukunaga by shifting the location of the hinge and latch so that they are opposite each other rather than cattycorner from each other. The motivation for this is well known in the art and would be to provide perpendicular lines of force for the operation of the lid. Well settled case law has shown that

merely shifting the location of parts is not grounds for a patent, In re Japsike, 181 F.2d 1019, 1023, 86 USPQ 70, 73 (CCPA 1950)

Allowable Subject Matter

- 10. Claims 8-9 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 11. The following is a statement of reasons for the indication of allowable subject matter: The pivotal motion causing actuation of arms to slide along a shaft.

Conclusion

- 12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pfaff teaches a heat sink. Ikeya and Kobayashi teach sockets.
- 13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Zarroli whose telephone number is 571-272-2101. The examiner can normally be reached on 7:30 to 3:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, T.C. Patel can be reached on (571) 272-2800 ext 39. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
